1.0 INTRODUCTION

At the request of Madori Limited, J.E. COULTER ASSOCIATES LIMITED has completed a noise impact study of the proposed residential development located at the northwest quadrant of the intersection of Elm Road and Ninth Line in Whitchurch-Stouffville, Ontario. See Figure #1 in Appendix A for a Key Plan.

The proposed development consists of three blocks of 3-storey townhouses. The development is in a residential area with an elementary school to the immediate north and residential to the south, east, and west. The purpose of the study is to provide recommendations needed to meet the applicable Ministry of the Environment, Conservation and Parks' (MECP) guidelines.

A review of the subject area indicates there are no sources of stationary noise that would affect the future residents of this proposed development. Similarly, there are no sources of vibration that have the potential to affect the future development. The study will focus on potential transportation noise impacts.

2.0 APPLICABLE CRITERIA

The MECP applicable criteria to a site such as this are found in its publication *NPC-300 "Environmental Guide for Noise, Stationary and Transportation Sources – Approval and Planning."* As per *NPC-300*, this development would be considered a Class 1 – Urban area.

2.1 Transportation Noise Guidelines

Transportation noise sources addressed by *NPC-300* include aircraft, rail traffic, and roadway traffic (which includes cars, trucks, buses, etc.).

Where the sound levels exceed 55 dB L_{eq} in private outdoor living areas (OLA), MECP requires noise mitigation measures to be incorporated into the subdivision design (i.e., intervening structures such as acoustic barriers or buildings and/or greater setbacks from the noise source). However, MECP will permit sound levels up to 60 dB L_{eq} daytime (5 dB above the criterion level of 55 dB L_{eq}) in private outdoor living areas (OLA) if it is not technically feasible to achieve 55 dB. Where the criterion levels are marginally exceeded, a warning clause is required in the Agreement of Purchase and Sale and the subdivision agreement. With respect to condominiums, balconies and terraces are considered OLAs only if they are 4m or greater in depth.

For residential buildings, the Ministry's ventilation requirements are based on the sound level at the exterior building façade. Where the sound levels at the exterior of the building façade exceed 55 dB L_{eq} daytime at the living room window or 50 dB L_{eq} nighttime at the bedroom window, the unit must be provided with forced air heating, with a provision for future air conditioning by the owner. An excess up to 10 dB is permissible, provided a warning clause is given. Where the sound levels exceed this limit (i.e., 65 dB L_{eq} daytime or 60 dB L_{eq} nighttime), air conditioning must be incorporated into the building design prior to occupancy. Warning clauses are applicable as well.

Air-conditioning requirements are applied so that adequate interior sound levels can be maintained with the windows closed.

The MECP also stipulates acceptable indoor sound levels limits, which vary depending on whether they are railway or roadway noise sources. The applicable MECP criteria are summarized in Table 1, below.

Table 1: Noise Criteria Summary

Type of Space	Road	
	Daytime (dB L _{eq}) (0700–2300)	Nighttime (dB L _{eq}) (2300–0700)
Outdoor Living Area (O.L.A.)	55	N/A
Bedrooms	45	40
Living/Dining	45	45
Kitchen/Baths	45	45

Note: OLAs for condominiums include elevated terraces/balconies greater than 4m in depth and common amenity areas such as rooftop patios. Grade-level patios etc. are considered OLAs regardless of depth.

The townhouse units are designed as dual fronting townhouses and have not been provided with grade level outdoor living areas. Additionally the 2nd and 3rd level balconies are less than 4.0m in depth and do not qualify as OLAs as per NPC-300. If front yards, back yards, side yards are provided or the depth of the elevated balconies are increased to 4m or greater or other terraces/balconies greater than 4m in depth are added, such areas will need to be addressed and may require noise barriers to meet the noise guidelines.

3.0 TRANSPORTATION NOISE SOURCES

The following sections summarize the noise sources surrounding the proposed development.

3.1 Roadway Noise Sources

The Average Annual Daily Traffic (AADT) volumes for Ninth line were provided by the Region of York and volumes for Elm Road were provided by the project's traffic consultant. The ultimate traffic volumes are used for Ninth Line and the traffic volumes for Elm Road have been provided by the project's traffic consultant. A day/night split of 94/6% was used for Ninth Line and Elm Road. The traffic volumes used in the analysis is summarized in Table 2, below.

Table 2: Road Traffic Volumes

Roadway	Traffic Volumes (AADT)	Truck Percentage (%)		Speed Limit (km/h)
		Medium	Heavy	
Elm Road (2035)	1,585	3	3	50
Ninth Line (Ultimate)	15,000	3	3	50

Generally, noise from Elm Road is expected to be relatively insignificant.

4.0 TRANSPORTATION NOISE ASSESSMENT

Based on the volumes provided in Section 3.0, the sound levels have been calculated at various façades of the proposed development. The roadway sound levels were calculated using the TNM module as implemented in CADNAA, in accordance with MECP publication *NPC-306*. Reflective ground absorption has been used in the calculations. The calculated sound levels are summarized in Table 3, below. Please see Appendix B for sample calculations.

Table 3: Transportation Noise Summary

Location	Point of Reception	Road	
		Daytime (dBA, L_{eq,16hr})	Nighttime (dBA, L_{eq,8hr})
Building #1 3-Storey Townhouse	Unit #8 North Façade	53	44
	Unit #9 North Façade	54	45
	Unit #9 East Façade	55	47
Building #2 3-Storey Townhouse	Unit #10 North Façade	59	50
	Unit #10 East Façade	62	53
	Unit #12 East Façade	60	51
Building #3 3-Storey Townhouse	Unit #13 South Façade	58	49
	Unit #17 South Façade	57	48
	Unit #20 South Façade	56	47

Notes:

1. Calculations are based on the Site Plan provided by VA3 Design, dated June 20, 2025.
2. The receiver heights are assumed to be 7.5m above grade.

4.1 Façade and Ventilation Control Recommendations

The predicted sound levels exceed the applicable MECP noise guidelines. Ventilation upgrades and minor façade upgrades should be implemented as follows.

As the sound levels are greater than 55 dBA L_{eq} and less than or equal to 65 dBA L_{eq} during the daytime for some units with direct exposure to the nearby roadways, all units should be provided with forced air heating with a provision for future air conditioning at the owner's discretion. It is likely all units will be provided with central air conditioning in any case, as is standard for such residential developments. All units mentioned above will need to be supplied with Warning Clause C (see Appendix C) in their Agreements of Purchase/Sale or Lease.

Any AC condensing units provided as part of the development should comply with NPC-216 and should not exceed a sound power level of 76 dBA.

Suite details have not been completed at this stage of the design. Based on the assumption of a window-to-floor area of 1:1, the following outlines the window configurations needed to achieve the STC ratings required to meet the applicable indoor sound levels:

1. All glazing on the north, south, and east facades of Building #2 may use windows rated to STC 30. The west façade may use standard OBC compliant glazing as upgrades are not needed.
2. Buildings 1 and 3 may use standard OBC compliant glazing as upgrades are not needed.
3. Any standard OBC compliant exterior wall or ceiling construction may be used for all buildings.

The glazing recommendations are based on preliminary suite layouts. However, given the modest sound levels, the final suite layouts should not affect the final glazing STC recommendations.

5.0 CONCLUSIONS

The proposed development is located in an area with a modest amount of transportation noise. Unmitigated, transportation sound levels exceed the MECP guidelines in limited areas. As a result, noise control measures in the form of ventilation upgrades, and slightly upgraded façade elements have been recommended. The extent and nature of these upgrades are similar to those required for most residential buildings near similar roadways.

Overall, the transportation noise study demonstrates that the proposed development meets the applicable MECP guidelines. There are no major noise issues that would prove challenging to address at later stages of the design.

6.0 SUMMARY OF RECOMMENDATIONS

To meet the requirements of the MECP, the following noise control measures will be required:

1. All units should be provided with forced air heating with a provision for future air conditioning by the owner, and supplied with Warning Clause C (see Appendix C) in their Agreements of Purchase/Sale or Lease. It is likely the units will be provided with central air conditioning in any case, as is standard for developments such as this. AC condensing units should meet NPC-216 requirements and not exceed 76 dBA sound power level.
2. Based on the sound levels, upgrades beyond STC 30 for the glazing are not expected to be required. Any OBC compliant exterior wall construction may be used for the entirety of the development. As the transportation sound levels are modest, the recommendations for glazing are unlikely to change once the suite layouts are finalized.

**Re: Request for Traffic Data
File No. T09, Forecasts - Whitchurch-Stouffville**

As requested, the traffic data for your study are summarized below.

	<u>Ninth Line</u>
Section No.	69-16
Location	North of Main Street
Existing AADT	9,000 (2019)
Ultimate AADT	15,000
No. of Lanes	2
Posted Speed	50 km/h
Trucks (Med/Heavy)	3% / 3%
Grade	Up to 2%
Day/Night Split	94/6
Planned ROW	Up to 36 m

I trust that this will be satisfactory for your study. The invoice will be sent to you separately.

Sincerely,

A handwritten signature in black ink that appears to read "Wenli Gao".

Subject: Elm Road - AADTs

Hi Mallory,

Here are the AADTs:

Ninth Line south of Elm – 9,000
Ninth Line north of Elm – 8,400
Elm Road – 1,250

These are existing AADTs based on the most recent traffic count at Elm/Ninth Line (peak hour volumes converted to AADTs). We never needed to derive future traffic volumes as the requirement was to assess existing and existing plus site traffic conditions. Since the site hardly generates any traffic, there is virtually no difference in AADT. If we were to estimate daily traffic volumes generated by the site, I'd say it would be up 50 cars on Elm, and say 60-70 on Ninth Line south of Elm. Depending on what horizon year they use, they may need to apply some nominal growth rate to existing traffic volumes. I'd use 1% per year for Elm and 2% for Ninth Line if they are not projecting too far into the future. If they need truck percentages, based on the same traffic survey that was undertaken in March 2023, Ninth Line has about 2.5%-3% trucks and Elm is about 6%. Hope this helps.

APPENDIX C: WARNING CLAUSES

- TYPE A:** "Purchasers/tenants are advised that sound levels due to increasing road traffic and rail traffic may occasionally interfere with some activities of the dwelling occupants as the sound levels exceed the sound level limits of the Municipality and the Ministry of the Environment, Conservations and Parks."
- TYPE B:** "Purchasers/tenants are advised that despite the inclusion of noise control features in the development and within the building units, sound levels due to increasing road traffic and rail traffic may on occasions interfere with some activities of the dwelling occupants as the sound levels exceed the sound level limits of the Municipality and the Ministry of the Environment, Conservations and Parks."
- TYPE C:** "This dwelling unit has been designed with the provision for adding central air conditioning at the occupant's discretion. Installation of central air conditioning by the occupant in low and medium density developments will allow windows and exterior doors to remain closed, thereby ensuring that the indoor sound levels are within the sound level limits of the Municipality and the Ministry of the Environment, Conservations and Parks."
- TYPE D:** "This dwelling unit has been supplied with a central air conditioning system which will allow windows and exterior doors to remain closed, thereby ensuring that the indoor sound levels are within the sound level limits of the Municipality and the Ministry of the Environment, Conservations and Parks."
- TYPE E:** "Purchasers/tenants are advised that due to the proximity of the adjacent commercial buildings, noise from the commercial buildings may at times be audible."
